WEEKLY HEALTH REPORT ON
CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES

The purpose of this report is to call attention to the most recent data of current significance in regard to health conditions and hospital facilities in Army posts in the continental United States. It is planned to issue in the near future a regular monthly report in which morbidity trends will be discussed at greater length.

MORBIDITY DATA

In this report admission rates are shown only for all causes combined, for all diseases combined and for a few specific diseases. In previous weekly reports these rates were shown on a weekly basis but in this report and henceforth the rates will be presented on an annual basis to facilitate comparisons with figures in annual and monthly reports. Such annual rates of admission indicate the number of admissions per 1000 mean strength which would occur over a year's time, assuming that the current week's experience continued through the year.

There are also shown in the report the number of cases of the more common epidemic and certain other diseases of special interest. Appended to the report is a list of cases of the rarer epidemic and certain other diseases.

HOSPITALIZATION DATA

The number of patients remaining in hospital at the end of the week per 1000 strength, as given in this report, furnishes an approximation to the current non-effective rate. Current hospitalization conditions are presented in terms of the normal beds available and vacant and the total beds occupied.

CURRENT TRENDS

As indicated in the chart on page 3, the admission rate from all causes combined rose slightly for the week ending 14 August 1943 as compared with the two preceding weeks. It reached a level about 18% higher than that during the corresponding period of 1942. This reflects the fact that in recent weeks the admission rate from all diseases combined has been running from 15% to 20% over that in 1942. However the admission rate from colds, influenza, etc. has for some months this year followed closely on that experienced in 1942.

EXPLANATORY MATTER

In reading the detail tables, it should be noted that any admission rate followed by a question mark (?) denotes a rate which has been computed on the basis of 5 or fewer cases. Such rates are unreliable as indications of trend or otherwise. The symbol # has been placed after the name of stations (or groups of stations) where part or all of the data for the current week have not been received and the previous week's figures have been substituted therefor.
